

Guilherme Martinelli Taglietti

Senior Backend Software Engineer | Distributed Systems | AI & Cloud Infrastructure

Brazil (Open to Remote)

guitaglietti@gmail.com | github.com/GuiTaglietti | linkedin.com/in/guilherme-taglietti |
guitaglietti.github.io

Professional Summary

Senior Backend Software Engineer with 5+ years of experience designing and operating distributed systems, scalable microservice architectures, and AI-driven solutions across cloud environments (AWS and Azure). Deep expertise in Python backend development, asynchronous processing, message-driven architectures (RabbitMQ, Redis, Celery), LLM integrations, RAG pipelines, and AI agents. Solid background in high-performance C++ algorithms, genetic algorithms, and parallel computing. Hands-on experience with Azure infrastructure (CosmosDB, Azure Service Bus, Container Apps, Ansible IaC), observability stacks (OpenTelemetry, Graylog, PostHog), and CI/CD pipelines. Proven track record of building and shipping production-grade SaaS products end-to-end — from backend architecture and AI engineering to DevOps, payments, i18n, and full product delivery.

Professional Experience

Senior Software Engineer — AI & Distributed Systems

Mar 2025 – Present

Command/Link — USA (Remote)

- Serve as Senior Software Engineer on the AI team, driving backend architecture decisions, engineering metrics, and cross-service integrations within a large-scale distributed platform.
- Design and develop Python/FastAPI microservices integrated with RabbitMQ and Azure Service Bus for asynchronous, event-driven communication, and Redis for caching and session management.
- Build and maintain AI-focused services for reporting, vector search, embeddings, and intelligence workflows, contributing directly to the AI team's roadmap and delivery.
- Architect and consume GraphQL (primary API) and REST APIs across service boundaries, enforcing API design standards and versioning best practices.
- Develop inbound and outbound integrations with Jira, ServiceNow, and PostHog, enabling cross-platform data flows for incident management, ticketing, and product analytics pipelines.
- Leverage Azure cloud services extensively: CosmosDB, Azure Service Bus, Container Apps, Azure CLI, and related ecosystem services for resilient, cloud-native deployments.
- Automate infrastructure provisioning and deployments on Azure using Ansible playbooks and Infrastructure as Code (IaC) practices, reducing manual intervention and improving deployment consistency.
- Design and maintain CI/CD pipelines using GitHub Actions and Jenkins, enabling automated testing, builds, and deployments across environments.
- Implement and maintain observability pipelines using OpenTelemetry (OTel), Graylog, and PostHog for distributed tracing, centralized log management, and product analytics.
- Develop and track engineering metrics — velocity, coverage, performance, and cost efficiency — producing actionable reports and optimization recommendations for the engineering team.

- Conduct thorough code reviews, enforce testing standards, and champion software quality across the team.
- Contribute to PHP (Laravel, Yii) services and React.js interfaces when required, maintaining full-stack delivery capability.
- Operate in an Agile environment with sprints, epics, story mapping, daily stand-ups, and retrospectives.

Software Engineer (Backend / Fullstack)

Sep 2024 – Mar 2026

DocQ — Dover, Delaware, USA (Remote)

- Designed and developed distributed backend microservices in Python using FastAPI and Flask.
- Architected asynchronous systems with background processing, queues, and workers using Redis and Celery.
- Implemented AI and LLM integrations in the backend core to enable intelligent document workflows and automation.
- Built and operated task pipelines and background jobs with a focus on reliability and cost efficiency.
- Containerized services using Docker and Docker Compose; deployed and operated applications on AWS infrastructure.
- Developed frontend interfaces with Vue.js, React.js, and Bootstrap to support backend-driven workflows.
- Demonstrated strong SQL and PL/pgSQL skills with PostgreSQL, including schema design, performance tuning, triggers, stored procedures, migrations, caching strategies, and query optimization.
- Collaborated with cross-functional teams on architecture decisions, scalability planning, and sprint delivery.

Software Developer — Research & Academic Systems

Jul 2022 – Sep 2024

Universidade de Passo Fundo — FabSoft

- Developed a high-performance genetic algorithm in C++ for conflict-free university timetabling, applying OpenMP parallelism, advanced heuristics, and optimized data structures.
- Automated experiment execution and data pipelines with Bash scripts, including parameterized batch runs and result collection for the genetic algorithm and Python tooling.
- Designed and implemented a Java web application using JSF, PrimeFaces, and JasperReports for academic report generation.
- Built Python scripts for data validation, preprocessing, and structured JSON reporting pipelines.
- Managed SQL databases (MySQL and MariaDB) for large academic datasets, including query optimization, schema maintenance, and routine backups.

Teaching Assistant & Instructor

Jan 2022 – Jul 2022

Universidade de Passo Fundo — UPF

- Co-taught competitive programming and led the ZZ-On web development course, mentoring 30+ students.
- Developed web applications with PHP and JavaScript; conducted data science research using Python, Jupyter, Pandas, NumPy, and Matplotlib.

SaaS & Entrepreneurial Projects

Acordify — AI-Powered Legal Contract Management SaaS *Founding Engineer, Jan 2025 – Present*

- Co-founded and engineered an end-to-end B2B SaaS platform for legal contract management and judicial process automation.
- Core product features: contract generation and comparison, risk analysis, legal gap detection, judicial process monitoring, hearing transcription and AI-driven audio analysis, and collaborative legal workspaces.
- Built the backend from scratch using Python and FastAPI with a focus on scalability, security, and async processing (Redis, multithreading, Celery-based pipelines).
- Integrated multiple AI providers (Claude, GPT) and transcription models, applying prompt engineering, RAG pipelines, and vector databases for intelligent document understanding.
- Implemented AWS S3 for document storage, payment gateway integrations for subscription management, caching layers, and observability tooling.
- Delivered the full React.js frontend, ensuring seamless API integration across frontend, backend, and AI services.

Kyntra — AI-Driven Red Team & Security SaaS *Member and Software Engineer*

- Built an end-to-end security SaaS product from scratch with a small team, focused on red team automation, pentesting workflows, and attack vector exploration.
- Implemented backend architecture using Python and FastAPI, integrating distributed processing, task pipelines, and scalable service design.
- Developed AI agents and intelligent automation using LangChain, LangGraph, RAG, and vector databases.
- Delivered the full SaaS ecosystem: landing page, user management, subscription flows, payment gateway integration, and internationalization (i18n).
- Designed and operated production infrastructure with Docker, Docker Compose, CI/CD pipelines, and Linux VPS deployments.
- Architected and built frontend using React.js, Redux, Tailwind CSS, Bootstrap, and Material UI.

Education

Bachelor's Degree in Computer Science

Universidade de Passo Fundo (UPF), Brazil

2022 – 2025

Technical Skills

Languages: Python, C++, Java, JavaScript, TypeScript, PHP, SQL, PL/pgSQL

Backend: FastAPI, Flask, Laravel, Yii, REST APIs, GraphQL, gRPC, Microservices, AsyncIO, RabbitMQ, Redis, Celery

AI & Data: LLM Integrations (Claude, GPT), LangChain, LangGraph, AI Agents, RAG, Vector Databases, Embeddings, Prompt Engineering, Transcription Models, TensorFlow, Genetic Algorithms, Pandas, NumPy

Frontend: React.js, Vue.js, Redux, Tailwind CSS, Material UI, Element Plus, Bootstrap, i18n

Databases: PostgreSQL, MySQL, Oracle, MongoDB, CosmosDB, Vector Databases

Cloud & Infrastructure: Azure (CosmosDB, Service Bus, Container Apps, Azure CLI), AWS (S3,

EC2), Docker, Docker Compose, Ansible (IaC), CI/CD, Linux, VPS Deployment

Observability: OpenTelemetry (OTel), Graylog, PostHog

Product & SaaS: SaaS Architecture, Payments, Subscriptions, Authentication, Automation Workflows, Engineering Metrics

Practices: Distributed Systems, Multithreading, Algorithms, Data Structures, Code Review, Agile (Scrum/Kanban), Software Architecture

Courses & Certifications

- Modern Advanced C++ Course — Udemy (UC-439ae987-261e-45a3-bc13-7ad6f70a321c)
- Mastering Data Structures & Algorithms using C and C++ — Udemy (UC-ab722506-1517-4637-b5a2-bc858cd7170f)
- TensorFlow: Machine Learning and Deep Learning with Python — Udemy (UC-43ad56a5-618f-45cf-a688-e8d97d337399)
- Java Best Practices for Efficient, Scalable, and Secure Code — Udemy (UC-bd118b48-1dcb-4d70-8850-944a5ef2e5cd)

Events & Competitions

- Brazilian Informatics Olympiad (OBI)
- SBC/ICPC Programming Contest — South America (Multiple Phases)
- The Developers Conference (TDC) — São Paulo
- Gramado Summit
- Porto Alegre Summit
- BSides BSB — Brasília
